Continuous Monitoring

Graduate Geo-Environmental Specialist Vacancies

GGS is an innovative environmental geology consultancy delivering specialist continuous monitoring and risk assessment services to the contaminated land and on-shore petroleum sectors.

Formed in 2009, following the successful completion of University of Manchester based research in collaboration with Dr Stephen Boulton into continuous ground-gas monitoring, GGS now has a range of team of geologists and environmental scientists with an international reputation.

As part of the company's expansion plans, and in-line with increasing demand, we now have a number of **Graduate Geo-Environmental Specialist** vacancies.

An essential part of the project delivery team, this role will involve a wide range of specialist site investigation, monitoring and risk assessment project work for both public and private sector clients.

Based at the Manchester Science Park, the role will involve extensive travel and site based work throughout the UK, interspersed with office based data processing and report writing.

If you have a good first degree in a geo/environmental science subject, good verbal and written skills, excellent interpersonal skills, a practical aptitude, and welcome challenges, please contact me at GGS.
